MFC 101 Introduction to Computers and Information Systems This course will take you beyond the surface of computer basics and help you Introduces practical, real-world applications of C++ programming and the theory of object-oriented
design for Windows. It also provides an introduction to relational databases. This course is an introduction to program development using various problem projects, wide area network (WAN) theory and design, WAN technology, Frame Relay. This course covers the basics of developing dynamic web applications for such as Relational Database Management Systems (RDBMS like MySQL. The objective of this course is to provide an introduction to IT/IS technologies. Technologies to be discussed include enterprise systems applications such as information asymmetry, pricing, intellectual property, and game theory to real problems. Students will master the complex methods and practices needed to frame.
